

Data Experts Needed

Project Title	Data Experts Needed
Project Summary	Work on our open data website that presents revenue brought in from natural resources extracted on federal lands and waters and other websites managed by our team. Help us verify, publish, and design new ways to visualize our data.
Country	United States

Project Description

We are informing policy debates and raising public awareness by building the definitive source of timely and useful data about how the government manages federal energy and mineral resources, revenue, and disbursements. You will participate in all aspects of data display including verifying and preparing data for the website, advising on new way to display data, publishing data, and learning about how all of these fit into the overall process of developing a live, open source government product. Learn from our experienced economists, analysts, subject matter experts, developers and UX designer. Since our work is open source, you will be able to use it as part of your portfolio. You will also have the opportunity to blog about your experience and present your work to virtual audiences. Our team is already mostly remote so it will be easy to integrate into our work flow. The exact tasks will depend on your expertise and interest areas and the needs of our team throughout the internship period.

Required Skills or Interests

Skill(s)

Data analysis

Data visualization

Website design
